## D.O.P.S.™ : Dropped Object Prevention Solutions

Globally, companies are struggling with the issue of objects being dropped from Mobile Elevating Work Platforms (MEWPs). Dropped objects can result employee injury or death, loss of equipment, loss of time, termination of employees, accident investigations, and too many other issues to name. Aerial lifts are perhaps the most challenging of hazards to deal with because they are mobile.

D.O.P.S.™ is a better solution than debris mesh because it encapsulates the boom or scissor lift platform. It covers the bottom, sides, door and control panel. Nothing dropped inside the platform can fall out. D.O.P.S.™ is an engineered product made from the highest quality materials. It only needs to be installed once and can remain in place for 24 months.

### Features, Benefits & Compliance

#### Features :

- Heavy-Duty Lightweight mesh weighing less than 20 lbs
- Constructed from a Flame Retardant Woven Mesh that passed both Cal. Fire Marshal-Title 19 & NFPA 701 testing
- Fully encapsulates the platform from top hand rail down to under the platform bottom
- Tool-less installation, fastened around mid rails using hook-and-loop, and strapped around handrail with two inch burst-resistant buckles.
- Product is designed for the rigors of outdoor construction. The flame retardant woven mesh is tested to ASTM D-2135 with a low temperature rating of -40° F and a UV Resistance of 1200 Hours ASTM G-53

#### Benefits :

- Maximum view through mesh for the equipment operator
- Quickly allows operator and passenger to exit platform through entryway
- Perform Daily housekeeping through bottom access zipper.
- Can be cleaned with petroleum distillates.
- Quickly install, still providing protection to workers, public and property.
- The **TUTUS Dropped Object Prevention Solutions (D.O.P.S.™)** is compatible with most major manufacturer products, and requires no alteration or modification of the equipment to install and use.

#### Compliance :

- Constructed from a Flame Retardant Woven Mesh
- Tested to Cal. Fire Marshal-Title 19 & NFPA 701
- Compliant with ANSI MH28.3 subsection 8.3.2

Compatible with products from:

**Genie Man DOPS Lift Enclosure With Center Drop Bar Entry**

## In-House Customization

goSafe offers a number of customization options for your on-site worker PPE and Office wear. We offer embroidery, emblem embroidery, custom reflective striping, screen printing, and pad printing to outfit your workforce. Not only does this make your brand look more professional at every level, it also provides ways to keep your workers safe with custom hi-viz striping for low-light environments and allows you and your workers to easier identify each other and their positions. It's easier to goSafe when everyone's on the same page.

### **CAMERA READY ARTWORK**

Vector artwork is preferred. If vector artwork cannot be supplied, we can convert supplied artwork to vector for an additional charge. The definition of camera ready artwork is black art on white background. The images and letters must be clear and must be the exact representation of the desired logo. For multi-color logos, artwork must have individual color separations with registration marks. Photocopies, business cards, decals, faxes, etc. are not considered Camera Ready.

Digital proofs will be provided so you can sign off and approve the artwork before orders are processed and started, preventing miscommunication and allowing for feedback and updates before final production.

goSafe may have resources for other product personalization that you might need. Please contact your goSafe representative for more information.

## Embroidery

Embroidery is one of the first enhancements most customers look at when considering decoration of apparel. A logo announces to the world who you represent and a strong first impression can make a big difference in business. We offer a wide selection of thread colors constructed of either 100% polyester (our default thread choice) or 100% rayon (available upon request).

## Emblem Embroidery

Embroidery can also be applied to emblems. We offer a wide selection of emblem background and border combinations to complement whatever the garment color or pattern may be. Emblems are a great choice for striped or patterned shirts where direct embroideries can often blend in. Another benefit of selecting to embroider on emblems is the flexibility they provide for removal should an employee's position or name change.

## Reflective Striping

Enhanced visibility can be critical when working in high-traffic areas, on construction sites or around equipment operation. Adding reflective striping to your uniform can make a lifesaving difference. Select from the many trim widths, colors and placements to make your enhancements have the highest impact. These distinctive stripings can be added to most garments. Flame-resistant striping is also available.

## Screen Printing

We offer 6 color silk screening on safety vests, rainwear, t-shirts, and promotional items. The Logo Department will make final determination on number of logo colors after receiving vector art files. Must receive ai or eps vector logo files, or an additional \$50 logo set-up fee may apply, which may also delay the order. Must also receive PMS colors if exact color match is required, \$35 fee. Otherwise colors will be matched as close as possible.

## Pad Printing

Customize your most common field safety head and eyewear. We offer pad printing on hard hats and safety glasses to make your worksite and brand look professional. Minimum order quantity of 20. Pad Printing can be applied to the back, front, or sides in up to 4 colors. Not available for all hat styles. Please contact a goSafe sales representative for additional details.

## Electrical Safety Consulting

Federal and State regulations require companies to perform an analysis of electrical systems and components to determine safe work practices for employees that may be exposed to electrical hazards. Medsafe has partnered with Bowtie Engineering to solve the Electrical Safety Puzzle with prescribed standardized process to perform and track incident energy data (arc flash), maintenance data and “qualified” worker data.

### Why should I consider a program like this?

- There were nearly 6,000 fatal electrical injuries to workers in the US between 1992 and 2012
- There were 24,100 non-fatal electrical burn injuries between 2003 and 2012
- The lowest non-fatal injury totals between 2010 and 2012 still averaged just under 2,000 per year
- About 98% of fatal occupational electrical injuries are electrical shock injuries
- Electrical injuries are more often fatal than many other injury categories
- Based on this data, OSHA estimates 12 non-fatal injuries and 2 fatalities per year for employees doing work covered by OSHA rules. Of those reports that indicated the extent of injuries, 75% reported third-degree burns

## Safety Sign Information

The standards for basic sign requirements are covered under the Occupational Safety and Health Administration (OSHA 29 CFR § 1910.154), and the American National Standards Institute (ANSI Z535) provides specifications, design, application and use of Headers, Legends and Symbols. These signs are intended to indicate potential, type of degree of the hazard that may lead to accidental injury or property damage. They both define specific hazards by conveying a clear and rapidly understood message.

### Applicable Safety Sign Standards

**Occupations Safety & Health Administration:** OSHA 29 CFR 1910.145: Specifications for accident prevention signs.

**American National Standards Institute:** ANSI Z535.1, .2, .3, .4, .5, .6: Six standards that specify format, colors, and symbols for accident prevention safety signs. Recognized by OSHA.

### Safety Sign Header Markings

**DANGER** — Indicates an imminently hazardous situation which, if not avoided, **will** result in **death** or **serious injury**.

**WARNING** — Indicates a potentially hazardous situation which, if not avoided, **could** result in **death** or **serious injury**.

**CAUTION** — Indicates a potentially hazardous situation which, if not avoided, **could** result in **minor** or **moderate injury**.

**NOTICE** — Preferred signal word to address practices not related to personal injury.

**SAFETY FIRST, THINK, EMERGENCY** — Indicates general instructions relative to safe work practices or indicates the location of safety equipment.

### Basic Safety Sign Selections

**Header**  
A "signal" word (or words) to designate the level of safety alert-fullness required, always located in the uppermost portion of the sign. Intended to capture and direct attention to the potentially hazardous situation.

*Many signs consist of just header and legend — Signs can also contain a symbol...*

**Symbol**  
Pictorials are graphic representations to clearly convey a specific alerting message compatible with and supplemental to the legend message. Universal in design and standardized to be easily understood.

**Legend**

The specific short message conveys the need to pay attention to a potential hazard or hazards, or take a necessary action to avoid such hazard(s).
